

PurityPlus is a nationwide partnership of select independent specialty gas companies, unified under one brand, that guarantees certified-quality product and unparalleled local service. When you see the purity plus logo, you'll know you're dealing with the most reliable network of gas distributors around.

Why switch to PurityPlus?

Because we are local, we are responsive, and our quality is as good or better than other national suppliers. We're face-to-face whenever a customer needs us. We are better equipped to deal with quick turnarounds and order changes. All while adhering to the absolute highest levels of product certification.

We will find the optimal solution for your business needs.

OUR MISSION

We commit to providing our customers with the best experience from beginning to end, making it easy to obtain the highest-quality cylinder gases, welding products, and supplies. We believe in the local nature of our business, giving our customers the personalization, responsiveness, and service of a local partner committed to the success of our businesses and our community.

SPECIALTY GAS. THERE WHEN YOU NEED IT.

Our specialty gas laboratory uses high accuracy scales combined with state-of-the-art cylinder preparation techniques to ensure accurate and stable mixtures. Welders Supply & Gases is able to respond to customer demands for unusual gas products and mixtures.

Pure & Mixed Gases

We obtain the highest purity liquids available and fill our specially prepared cylinders. To insure that no impurities are introduced, we fill these cylinders using stainless steel/monel piping and diaphragm packed valves.

The cylinder of gas is then tested for trace hydrocarbons, trace oxygen and moisture. Further contamination analysis for the higher purity gases is done with our gas chromatograph.

- Laboratory Gases
- Calibration Gases
- Beverage Gases
- Medical
- Clinical Gases
- Laser Mixtures
- EPA Protocols
- Research Gases
- Emission Gases
- NIST Traceable Mix
- UHP (Ultra High Purity)

Specialty Gases

- Argon
- Nitrogen
- Helium
- Air
- Hydrogen
- Oxygen
- Carbon Dioxide
- Methane
